Accentra™: A Revolution in the Control of Light

Adding a new dimension to lighting management, P.A.L.'s Accentra illuminates retail and business settings in a way that's both architecturally appealing and functional.

So whether you choose Accentra to highlight a specific product display or illuminate an entire room, this versatile fixture lets you efficiently light a work space to promote sales, increase productivity or simply to enhance the commercial possibilities of your environment.

A specification-grade lighting system that offers a dramatic, contemporary appearance at an affordable cost, the new Accentra series from P.A.L. draws visual attention to the points of interest you desire.

Ideal for retail and commercial operations that aim for sophistication as well as functionality, Accentra is especially well suited for such applications as art galleries, retail establishments and commercial buildings.

In summary, Accentra is a perfect complement to almost any architectural setting, and with its superb construction and full custom color palette of powder-coat finishes, it will present your establishment in a positive light while providing many years of trouble-free service.

A complete modular lighting system, the Accentra linear fluorescent series is aimable and may be configured to form continuous rows.

Uncompromising Style and a Wide Range of Optics

While it's both affordable and aesthetically appealing, the Accentra series truly excels in the area of performance.

Available with either one or two T5 or T5HO fluorescent lamps, this compact luminaire offers a broad choice of illumination levels. Even more important, this illumination can be controlled and directed according to the user's need,

whether the goal is to focus on a single piece of merchandise or provide uniform illumination over an entire wall.

Accentra fixtures facilitate both uplighting and downlighting, providing combinations of direct and indirect light in an almost infinite degree of choice and offering a much greater range of flexibility than a typical linear fluorescent fixture.

Optical variations include:

- Wide-spread indirect distribution for use in open office areas or multi-purpose rooms
- General distribution for small offices, corridors and reception areas
- Concentrated, narrow distribution for wall washing, accents or merchandising

With a variety of available optics and 359-degree aimability, Accentra provides precise control over targeted lightspace, enabling a single luminaire to do the work of multiple track fixtures.

Flexible Configuration for Flexible Applications

Accentra can be configured to match both the design and floor plan of your building. Standard lengths of 2', 3', 4', 6' and 8' provide additional flexibility while reducing acquisition, installation and ownership costs.

Modular mounting points facilitate T-bar installation with either stainless steel aircraft cable or die-cast aluminum ceiling brackets. Rigid extruded aluminum wall brackets,

available in 6", 12", 18" and 24" lengths, complement the fixture design.

This configuration agility allows Accentra to meet a wide range of applications with a minimum of fixtures. And with its rotatable feature and variety of optics, Accentra works well as either an accent light or as a source of comfortable ambient illumination, making it an ideal choice for remodeling projects as well as new construction.

With contemporary reverse corners and its sleek, compact housing, the Accentra series makes a unique, yet functional, lighting statement.
